

EMBRAER SIGNED SERVICES AGREEMENT FOR THE AIR PEACE E-JETS E2S FLEET

News / Airlines, Maintenance / Trainings, Manufacturer

At MRO Middle East event in Dubai Embraer has signed a comprehensive long-term services agreement with Air Peace, Nigeria and West Africa's largest airline, to support the airline's E195-E2 and ERJ 145 fleets. The contract includes access to the Pool Program, which includes component exchanges and repair services for hundreds of reparable items for Air Peace's Embraer aircraft, and the installation of the Ahead-Pro (Aircraft Health Analysis and Diagnosis – PROgnosis) in the airline's E195-E2 fleet.

“This service agreement with Embraer is important to Air Peace's operational success, offering us immediate access to an inventory of parts, that is efficiently managed and reduces our capex (capital expenditure) requirement for initial provision of spare parts,” said Oluwatoyin Olajide, Chief Operating Officer, Air Peace. “In addition, with the Ahead-Pro, we will be able to anticipate any potential maintenance issues and optimize the aircraft use, enhancing our fleet schedule reliability.”

Air Peace is the launch customer in Africa for the E2s, the newest, most efficient, and most comfortable aircraft in the segment. The airline is also the global launch customer for Embraer's innovative premium staggered seating design. The airline has 13 firm orders for the E195-E2s, with 17 remaining purchase rights for the same model, also operating eight ERJ 145s. Five of the 13 firm orders were delivered in 2021, with more to be delivered this year.

"To have both E195-E2 and ERJ 145 jets covered by our Pool Program shows Air Peace's trust in Embraer's products and services. As the first E2 operator in Africa, our main goal is to support Air Peace's smooth aircraft operation and maintain the readiness of the ERJs," said Danielle Vardaro, Head of Worldwide Customer Support and Aftermarket Sales, Embraer Services & Support.

The Pool Program will provide the most efficient and reliable solutions to Air Peace's fleet. The airline will benefit from the availability of spare parts, enjoy significant savings on repair and service costs, and maintain a profitable operation. The Embraer Pool Program is designed to allow airlines to minimize their upfront investment in high-value repairable inventories and resources and to take advantage of Embraer's technical expertise and its vast component repair service provider network. Currently, the Pool Program supports more than 50 airlines worldwide.

The Ahead-Pro is a state-of-the-art maintenance diagnostic management tool. The system leads to corrective and preventive maintenance planning management optimization and has been well recognized by customers worldwide. The system is a computational web-based platform that enables airlines to continuously monitor the health of an aircraft while it is in flight. This is done through the automatic and real-time transmission of alert and maintenance messages from the aircraft systems to a ground base, which will be received and used to generate fault identification reports. Troubleshooting and maintenance resource planning occurs even before aircraft arrival to its destination, optimizing the turn-around time between flights.
